Matthew Wisdom

matthewwisdom11@gmail.com | +234 912 897 6463 | matt-wisdom.github.io | github.com/matt-wisdom

Software and AI engineer with 5 years of experience specializing in Full-Stack Web Development, LLM orchestration, production ML systems, and high-throughput APIs. Proven track record of reducing LLM costs, cutting API latency, and shipping scalable AI and Data pipelines.

TECHNICAL SKILLS

Languages: Go, Python, JavaScript/TypeScript, SQL, Bash

AI & Web: LangGraph, LangChain, RAG (Qdrant), vLLM, Ray, MLFlow, PyTorch, FastAPI, Go Fiber, RabbitMQ, Redis, PostgreSQL, NodeJS, MCP, VueJS, NuxtJS

Cloud & Ops: AWS (EC2, Lambda, ECS), Docker, Terraform, Prometheus, Grafana, LangFuse, OpenTelemetry, GitHub Actions

EXPERIENCE

Founding Engineer (Backend & AI) · KwevoxAI (Remote, Nigeria) Jan 2025 – Present

- Architected a multi-stage AI generation pipeline using LangGraph for LaunchpadNG, coordinating LLMs to autonomously plan, generate code, and self-correct website and e-commerce deployments — cutting end-to-end site generation time by ~70% to under 5 minutes.
- Engineered production RAG systems using Qdrant vector DB with intelligent rate limiting, response caching, and smart model routing — reducing LLM inference costs by 50% while maintaining retrieval quality at scale.
- Guided VueJS frontend architecture and UI direction alongside backend ownership, and coordinated a team of 3 developers — bridging backend systems design with product-facing decisions.
- Reduced API latency ~3× on high-traffic endpoints through Redis caching and PostgreSQL schema refactoring.
- Owned code review process across the team, enforcing design and quality standards through structured PR reviews that improved code consistency and reduced regressions before deployment.
- Deployed a monitoring infrastructure with Grafana, Cloudwatch and Langfuse for granular AI telemetry, actively tracking daily events and maintaining **99.95%** uptime.

Fullstack & AI Engineer · Home Team Management LLC · Remote (US) Oct 2023 – Jan 2025

- Built a Go-based concurrent auto-fill API delivering predictive field suggestions at sub-50ms latency for military-scale administrative forms.
- Developed HeroForms.io, digitizing military workflows with encrypted e-signing and automated high-throughput document routing.
- Built and maintained DIYPayroll, a payroll and tax compliance system ensuring accurate processing for $50,000+ USD in monthly transactions.
- Designed and deployed an Isolation Forest anomaly detection model for payroll transaction monitoring — configured for high-recall compliance use (0.93 recall, 0.30 precision), flagging 2+ anomalies in the first month of operation.

Backend Engineer (Contract) · US Startup Clients via Turing.com · Remote Feb 2023 – Apr 2024

- Delivered AI document processing pipelines and REST APIs serving 15,000+ daily requests with 99.9% uptime.
- Managed LLM serving infrastructure using Ray and vLLM; improved query latency 15% via PostgreSQL query optimization.

Freelance Backend Engineer · BetterCNC ·Remote Jan 2023 – Apr 2023

- Built ETL pipelines using DuckDB and VueJS to ingest and visualize CNC machine job data, replacing manual tracking with real-time operational analytics.

Freelance Backend Engineer · Lions PromoBot · Remote Apr 2022 – Jan 2023

- Scaled an asynchronous Python backend to handle 5,000+ concurrent requests, facilitating a 100× increase in user load while keeping query latency under 100ms.

Software Support Engineer · Fixexception.com · (Remote, Ukraine) Jan 2021 - March 2022

- Troubleshot and resolved code-level exceptions for a global user base across Python and JavaScript.
- Debugged user-submitted scripts to identify root causes of logical and syntax errors, providing optimized code solutions.
- Communicated debugging strategies and technical fixes clearly to developers of varying skill levels.

Assistant Community Lead (Volunteer) · AIBauchi · (Nigeria) Oct 2022 - Present

- Led development of the **Large Hausa Model (LHM)**, one of Nigeria's pioneering indigenous language LLM initiatives, collaborating with researchers and engineers to advance multilingual AI.
- Organized and facilitated AI workshops, technical seminars, and hands-on training sessions on machine learning, LLMs, and open-source AI development.
- Delivered technical talks on topics including Machine Learning, LLM engineering, MLOps, and production AI systems.

SELECTED PROJECTS

Arishem https://arishem.site 2026

- Developed an AI red-teaming engine orchestrating Scout (static AST profiler), Attacker, and Auditor agents to dynamically probe target workflows. Engineered a secure Docker-out-of-Docker (DooD) execution sandbox and a golang gateway server.

Akọfe-ọla https://akofe-ola.kwevox.ng KwevoxAI 2026

- Fine-tuned a 23M-parameter MiniLM on 20K+ Igala-English sentence pairs to power semantic search on a full-stack Igala dictionary platform; built a custom evaluation set for a near-zero-resource language pair, improving MRR and Recall@5 by ~25% over the base model. Collaborated with a team on sourcing and quality assurance for the underlying Igala language corpus..

KEmbed-Naija · *huggingface.co/matt-wisdom/KEmbed-naija-v3* 2026

- Sourced data and Fine-tuned BAAI/bge-m3 for dense retrieval across Hausa, Yoruba, Igbo, and Nigerian Pidgin. Achieved NDCG@10 0.781 on MIRACL Yoruba, surpassing prior SOTA by +14.2 MRR points with under 45% of the training data.

Reverie AI: Graph-Augmented Multi-Agent Code Review github.com/matt-wisdom/reverie-ai 2025

- Multi-agent security and bug detection system that compiles codebases into a Knowledge Graph using tree-sitter, then runs parallel Security/Bug/Smell agents via LangGraph — performing cross-file taint analysis from API entry points to dangerous sinks, with SARIF report export and a Vue.js dashboard

Large Hausa Model (LHM) – AI Bauchi *lhm.tinnyrobot.com* 2022

- Led development of an early Hausa Large Language Model (LHM).
  Recognized as an Outstanding Community Project for advancing indigenous language AI.

EDUCATION

B.Eng, Mechatronics and Systems Engineering Abubakar Tafawa Balewa University, *2024*

Dean's List for academic excellence during the first two academic years.
Relevant Coursework: Robotics, Machine Learning, Control Engineering, Systems Engineering, Computer Vision, Embedded Systems, Digital Signal Processing.
